

Speed and simplicity for pathogen testing

Neogen® Molecular Detection System

Neogen Molecular Detection Assays 2 (MDA 2)

Each assay contains two main components:

Ready-To-Use Reagent Tubes

- Single post-enrichment assay protocol helps improve productivity
- Detects 1-5 CFU of target pathogen per original sample

Ready-To-Use Lysis Solution

- Advanced chemistry based on nanotechnology
- Color-change process control for increased confidence in lysis step

User-Friendly Software

- Intuitive user interface for quick and easy setup
- All assays can be run simultaneously for optimal efficiency
- Real-time results help make critical decisions faster

Compact Instrument

- Space-saving design fits in any lab
- Flexibility to test up to 96 samples in each run
- Neogen provides global service with local support teams

Reagent tubes are color-coded by organism for easy identification:

MDA 2 - *Salmonella*

MDA 2 - *E. coli* O157 (including H7)

MDA 2 - *Listeria*

MDA 2 - *Listeria monocytogenes*

MDA 2 - *Cronobacter*

MDA 2 - *Campylobacter*

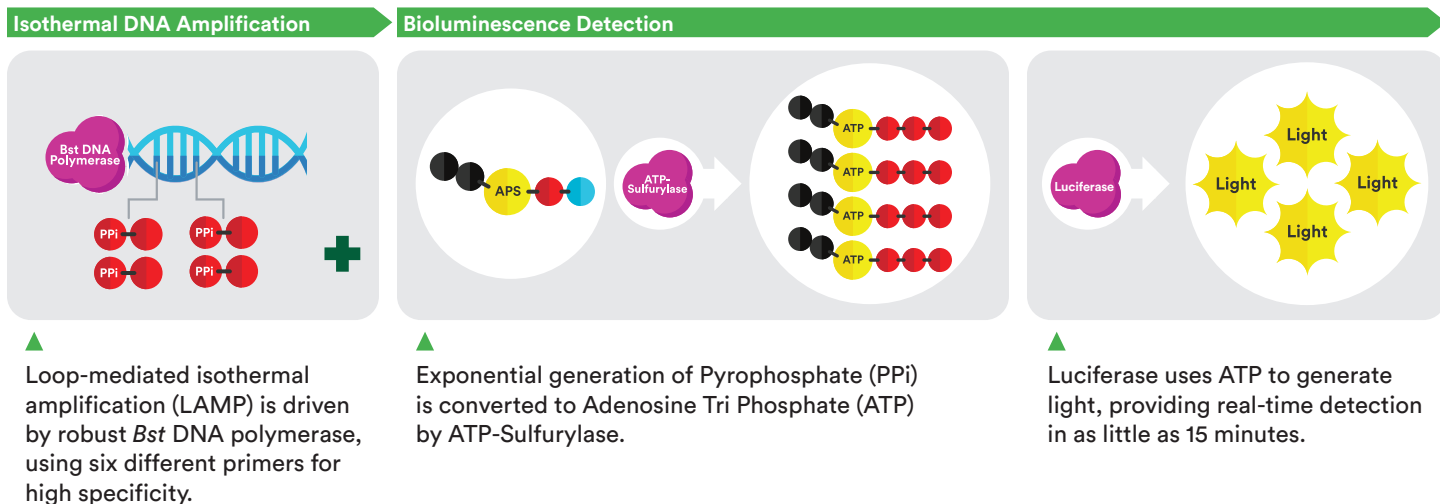

MDA 2 - STEC Gene Screen (*stx*)

MDA 2 - STEC Gene Screen (*stx* and *eae*)

How it works

Neogen uses advanced technologies — Isothermal DNA Amplification and Bioluminescence Detection — to bring you the next generation of Molecular Detection Assays for an accurate, reliable molecular solution with increased productivity. Allowing you to make critical decisions faster, streamline your process and protect your business — and your bottom line.

▲ Loop-mediated isothermal amplification (LAMP) is driven by robust *Bst* DNA polymerase, using six different primers for high specificity.

▲ Exponential generation of Pyrophosphate (PPI) is converted to Adenosine Tri Phosphate (ATP) by ATP-Sulfurylase.

▲ Luciferase uses ATP to generate light, providing real-time detection in as little as 15 minutes.
