

Free up your focus

Neogen® Molecular Detection Assay 2 (MDA 2) - *Campylobacter and *Campylobacter* Enrichment Broth**

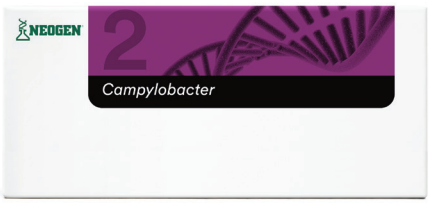

***Primary detection method used by the USDA Food Safety and Inspection Service*[1]**

There's now a better way to test for bacteria associated with poultry production. Find new efficiencies and simplify *Campylobacter* testing with Neogen MDA 2 - *Campylobacter*.

Featuring all the benefits of the Neogen Molecular Detection System, this assay and one-step enrichment broth are easy to use and accurate.

It's significantly faster than alternatives like PCR, immunoassay, and culture methods.

- Efficiently monitors for *Campylobacter*
- Simplified enrichment prep and protocol
- Easy to use and train
- Streamlined workflow
- Reliable
- Next-day results

Proven performance

Neogen MDA 2 - *Campylobacter*

While *Campylobacter* may not be your most frequent poultry test, it can't be ignored either — this pathogen causes an estimated 1.5 million illnesses each year in the U.S.[2] Now you can test for *Campylobacter* with a solution from Neogen.

The Neogen Molecular Detection System with Neogen MDA 2 - *Campylobacter* and MDA 2 - *Salmonella* is a complete solution that allows you to monitor poultry for both bacteria simultaneously. A single post-enrichment protocol for these pathogens means you can perform up to 96 tests of multiple types in one 60-minute run. And when compared using metrics such as time to result, throughput, unit size, and workflow, Neogen MDA 2 - *Campylobacter* outperforms other methods and manufacturers.

Campylobacter Enrichment Broth

- Easy-to-use
- Simplified enrichment — just add sterile water
- No supplements, microaerophilic incubation, organic solvents, or autoclaving the broth

Certifications and Validations

(view the method for specific details on the validations):

- AOAC® *Performance Tested Method*℠ *(Certificate #111803)*
