

Neogen Analytics Essentials

Food safety data in real time.

One full-featured solution for managing, analyzing, and communicating your food safety testing data with no hidden costs.

The essential tools required by food safety managers for greater efficiency, certainty, and responsiveness are standard with Neogen® Analytics Essentials.

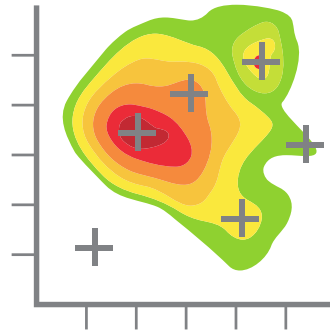

- Neogen Analytics Essentials is included with the Neogen® Petrifilm® Plate Reader Advanced or Neogen® Clean-Trace® LM1 Luminometer
- Delivers premium features that cost hundreds or thousands of dollars in other systems
- Integrate unlimited testing data from your Neogen devices in use at any production facility
- Receive instant access to diagnostic results and trending analytics in real-time
- Provide unlimited users with actionable information from the cloud on any browser device and from any location

Efficient

Save time and money by replacing repetitive, error-prone food safety tasks with automated workflows, instant notifications, and unparalleled insight.

Effective

Visual dynamic maps help pinpoint areas that require further focus. Real-time alerts allow you to make critical and timely decisions with confidence.

Essential

The fundamental tools you need to monitor, assess, and rapidly respond to the food safety data you collect are all included free in this powerful system. That's our standard.

The insights you need, when you need them

When action is required, time adds risk and costs money. Neogen Analytics Essentials combines data from multiple sources, presents it in an easy-to-understand format, and alerts you to any potential problems in real time.

Some call that premium. We call it *Essential*.

Access via the Cloud

Data is collected via normal use of testing devices and synced to Essentials via our 'always on' cloud connection. Information and data are then immediately available to all users no matter where they are located.

Intuitive Data Visualization

Test results are displayed on interactive floor plans as diagnostics occur. Test point mapping shows both current and historical data, providing instant visualization of new and recurring hot spots as device diagnostic results sync to the cloud.

Preventative Risk Management

Neogen Analytics Essentials delivers auto alerts based on data thresholds that you set and control. This allows the right people to be alerted to action immediately as issues are emerging – BEFORE they grow into costly problems.

Support You Can Rely On

Neogen Analytics Essentials is cloud-based and requires no IT involvement for set up. Neogen's world-class IT Services team is always on-tap to assist with installation, combined with simple in-app user guides and videos for immediate and intuitive support.

Your World in Your Hands

Multiple testing devices and methods feed one unified, cloud-based system. Gain an enterprise-wide understanding of your food safety performance from any browser device.

Always-on Audit Prep

No more mad scrambles to pull documents together. Become audit ready with access to data that is always current, accessible, and formatted to support audits, inspections, and certifications.

Still Need More?

Seamless transition to enterprise solution

As your business grows or your needs change, rest assured that we will grow along with you. Your Essentials platform with all its data can be easily upgraded to the full Neogen Analytics solution. So why wait? Contact Neogen or your account team today to learn more.
