

Technical Specification Sheet

APT Agar SKU: 700003432, 700003433, 700003434, 700003435 NCM0159

Intended Use

APT Agar is used for the cultivation of heterofermentative lactobacilli in a laboratory setting. APT Agar is not intended for use in the diagnosis of disease or other conditions in humans.

Description

Evans and Niven investigated the cultivation of heterofermentative lactobacilli, causing the faded or green discoloration of cured meat products. Deibel, Evans, and Niven tested thiamine-requiring bacteria, specifically *Lactobacillus viridescens*. Their formulations led to the development of APT Agar.

Lactic acid bacteria, a group of acid-producing bacteria, include the genera *Streptococcus*, *Leuconostoc*, *Pediococcus*, and *Lactobacillus*. These organisms are widespread in nature, associated with bacterial spoilage of foods including dairy products, meat, and vegetables. APT Agar is used for cultivating heterofermentative lactic acid bacteria from food products.

Typical Formulation

| | |
|----------------------------|----------|
| Enzymatic Digest of Casein | 10.0 g/L |
| Yeast Extract | 7.5 g/L |
| Sodium Chloride | 5.0 g/L |
| Potassium Phosphate | 5.0 g/L |
| Sodium Citrate | 5.0 g/L |
| Dextrose | 10.0 g/L |
| Polysorbate 80 | 0.2 g/L |
| Magnesium Sulfate | 0.8 g/L |
| Manganese Chloride | 0.14 g/L |
| Ferrous Sulfate | 0.04 g/L |
| Sodium Carbonate | 1.25 g/L |
| Agar | 13.5 g/L |

Final pH: 6.7 ± 0.2 at 25°C

Formula is adjusted and/or supplemented as required to meet performance specifications.

Precaution

Refer to SDS

Preparation

1. Suspend 58 g of the medium in one liter of purified water.
2. Heat with frequent agitation and boil for one minute to completely dissolve the medium.
3. Autoclave at 118 - 121°C for 15 minutes.
4. Cool to 45-50°C.

Technical Specification Sheet

Quality Control Specifications

Dehydrated Appearance: Powder is homogeneous, free flowing, and light beige.

Prepared Appearance: Prepared medium is trace to slightly hazy, amber, with trace to slight precipitate.

Expected Cultural Response: Cultural response on APT Agar at $35 \pm 2^\circ\text{C}$ after 18 - 72 hours incubation.

| Microorganism | Approx. Inoculum (CFU) | Response |
|--|------------------------|-------------|
| <i>Lactobacillus fermentum</i> ATCC® 9338 | 10 - 300 | Good growth |
| <i>Leuconostoc pseudomesenteroides</i> ATCC® 12291 | 10 - 300 | Good growth |

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure

Refer to appropriate references for specific procedures using APT Agar.

Results

Refer to appropriate references and procedures for results.

Expiration

Refer to expiration date stamped on the container. The dehydrated medium should be discarded if not free flowing, or if appearance has changed from the original color. Expiry applies to medium in it's intact container when stored as directed.

Limitation of the Procedure

Due to varying nutritional requirements, some strains may be encountered that grow poorly or fail to grow on this medium.

Storage

Store dehydrated culture media at $2-30^\circ\text{C}$ away from direct sunlight. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.
