

Technical Specification Sheet

HC Agar Base SKU: 700003416, 700003417, 700003418, 700003419 NCM0155

Intended Use

HC Agar Base is used with Tween 80 (Polysorbate 80) for the enumeration of molds in cosmetics in a laboratory setting. HC Agar Base is not intended for use in the diagnosis of disease or other conditions in humans.

Description

Methods for isolating molds from cosmetic products require incubation for 5 - 7 days using traditional agar media. In 1986, Mead and O'Neill described a new medium, HC Agar, for enumerating molds in cosmetic products. The formulation of HC Agar decreased incubation time to 3 days at $27.5 \pm 0.5^{\circ}\text{C}$ for molds. HC Agar Base, based on the HC Agar formula of Mead and O'Neill, is supplemented with Tween 80 (Polysorbate 80) to prepare HC Agar.

Typical Formulation

Enzymatic Digest of Casein	2.5 g/L
Enzymatic Digest of Animal Tissue	2.5 g/L
Yeast Extract	5.0 g/L
Dextrose	20.0 g/L
Disodium Phosphate	3.5 g/L
Monopotassium Phosphate	3.4 g/L
Ammonium Chloride	1.4 g/L
Sodium Carbonate	1.0 g/L
Magnesium Sulfate	0.06 g/L
Chloramphenicol	0.1 g/L
Agar	15.0 g/L

Final pH: 7.0 ± 0.2 at 25°C

Formula is adjusted and/or supplemented as required to meet performance specifications.

Supplement / Liter (7992)

Tween 80, 20 mL

Precaution

Refer to SDS

Preparation

1. Suspend 54.5 g of the medium in one liter of purified water.
2. Heat with frequent agitation and boil for one minute to completely dissolve the medium.
3. Add 20 mL of Tween 80/Polysorbate 80 (7992) and mix.
4. Autoclave at 121°C for 15 minutes.
5. Cool to $45\text{-}50^{\circ}\text{C}$.

Quality Control Specifications

Dehydrated Appearance: Powder is homogeneous, free flowing, and light to medium beige.

Prepared Appearance: Prepared medium is trace to slightly hazy and medium to dark amber.

Expected Cultural Response: Cultural response on HC Agar Base supplemented with Tween 80 incubated aerobically at $27 \pm 0.5^{\circ}\text{C}$ and examined for growth after 2 - 7 days incubation.

Technical Specification Sheet

Microorganism	Approx. Inoculum (CFU)	Expected Results
<i>Aspergillus brasiliensis</i> ATCC® 16404	Point Inoculation	Growth
<i>Bacillus subtilis</i> ATCC® 9372	300 - 1000	Completely Inhibited
<i>Candida albicans</i> ATCC® 10231	10 - 300	Fair to Excellent
<i>Escherichia coli</i> ATCC® 25922	300 - 1000	Completely Inhibited
<i>Penicillium roquefortii</i> ATCC® 10110	Point Inoculation	Growth
<i>Pseudomonas aeruginosa</i> ATCC® 27853	300 - 1000	Partially to Completely Inhibited
<i>Staphylococcus aureus</i> ATCC® 25923	300 - 1000	Completely Inhibited

The organisms listed are the minimum that should be used for quality control testing.

Test Procedure

1. Process each specimen as appropriate and inoculate directly onto surface of the medium. Inoculate duplicate plates.
2. Incubate plates aerobically at $27 \pm 0.5^{\circ}\text{C}$.
3. Examine plates for growth and recovery after 72 hours incubation.
4. Count mold colonies from duplicate plates and record average count as mold count per gram or milliliter of sample.

Results

Mold colonies should yield good growth and recovery. Bacteria should be inhibited.

Expiration

Refer to expiration date stamped on container. The dehydrated medium should be discarded if not free flowing, or if appearance has changed from the original color. Expiry applies to medium in its intact container when stored as directed.

Limitations of the Procedure

1. Due to nutritional variation, some strains may be encountered that grow poorly or fail to grow.
2. The $27 \pm 0.5^{\circ}\text{C}$ incubation temperature is critical for obtaining statistically significant mold counts after three days.

Storage

Store dehydrated culture media at $2-30^{\circ}\text{C}$ away from direct sunlight. Once opened and recapped, place container in a low humidity environment at the same storage temperature. Protect from moisture and light by keeping container tightly closed.
